

Fibre cables and accessories, Standard loose tube size with color-coated fibers and gel-filled results in economical use and facilitates installation. Steel wire or FRP as the dielectric member for central strength element with no bonding. Central member with loose tube SZ stranded and if necessary fillers isolates fibers from installation. Waterproof Element 

Fibre cables and accessories, Standard loose tube size with color-coated fibers and gel-filled results in economical use and facilitates installation. Steel wire or FRP as the dielectric member for central strength element with no bonding. Central member with loose tube SZ stranded and if necessary fillers isolates fibers from installation. The filling compound around the cable core and if necessary water-swellable tape. Double steel tapes provide superior rodent resistance for direct buried application. Easily ripping the cable jacket and steel tape. Triple PE jacket strengths the mechanical capability and excellent UV-resistance and provides superior protection against abrasion.
